Resources of Cogniz Software include professionally configured office environment. Multimedia compatible computer hardware with the latest in software helps to ensure that the highest quality sites are designed.

Site Design Methodology:

As a part of our development methodology, we identify the following ingredients that make a successful Website.

Technology Used:

- Microsoft Technology: ASP.Net, C# framework 3.5
- PHP
- CakePHP
- Wordpress
- Codeigniter
- Dolphin
- Joomla
- Prestashop
- Drupal
- Magento
- OsCommerce
- Flash
- AS3
- Java
- Android

Database Services

- SQL Server 2005/2008
- DB2
- MYSQL
- Oracle
- Ms-Access

Fast loading:

The reason visitors do not stay at a website is due to excessive loading time that is the time it takes for the page to appear on the computer screen. The site needs to be designed around the premise of loading as quickly as possible.

To achieve this, Cogniz Software will ensure a strong text base for the pages (text loads extremely quickly). When photographs are used, we will tailor them to be the appropriate size and structure to ensure that they load within an appropriate timeframe. *CSS style-sheets* will be used to develop the text layout and structure of pages to make them compatible to the W3C (World Wide Web Consortium) standards for all popular web browsers. This allows for changes in font styling and color tweaking that will reflect across all areas within the site.

Browser compatibility:

The site needs to be compatible for viewing across a wide range of user platforms and browser software. We will test the site with many different browsers to ensure that the vast majority of visitors can see the site quickly and easily. We here at Cogniz Software practice developing websites that are compatible with new emerging browsers that incorporates newest and latest technologies.

Look:

An Internet site today represents the first contact point for many prospective clients. It is, in a nutshell, showing how professional a company is, and what kind of attitude they have in selling themselves. We will discuss the interface and layout of the site with you, to ensure the site is attractive, appealing and that it reflects the appropriate image.

Precise Information:

Along with having an appealing and attractive look and feel to the site, the content of the site must be precisely what the user needs to see. Additionally, search engine positioning must be considered and the site will be developed with consideration of key words and search engine placement.

Interactivity:

Without interactivity, a website is purely an online book. Interactive sites capture user details online and monitor what users do inside the system. The more visitors can interact and 'do things' on the site, the more likely they are to revisit.

Payment Policy:

We charge **25% advance payment** and the rest amount payment will be charged in **3** predefined milestones for the proposed Application.

Our Services

Mobile Apps

Android
Iphone
Symbian
Blackberry
